for its size.

Minimaster. A new line of low-cost, small-bore pneumatic and hydraulic cylinders with these big advantages:

1. Durable stainless steel piston rod and long-wearing bronze rod bearing.
2. Hardened, non-corrosive aluminum tubing extends cylinder life.
3. Standard with cushioning bumpers.
4. Pressure-energized seals . . . for positive sealing, long wear.
5. Three standard integral mountings — plus optional kits.
6. A streamlined design — with no tie rods.

- Double acting or single acting spring return.
- Standard ¾″ and 1⅛″ bore sizes.

It's the biggest value in a small-bore cylinder.

a ball

On Powermaster pneumatic and hydraulic cylinders, needle valve and ball check functions are combined. It's part of WABCO's new *Exactajust* ultrasensitive cushioning system. Separate ball checks aren't needed, so extra service points are eliminated and mounting flexibility is increased. *Exactajust* cushioning, with calibrated indicator ring, permits micrometer-like accuracy in making adjustments. And the ring holds needle valve safely in place; won't let it back out. On pneumatic cylinders, *Exactajust* system provides positive seal-off for maximum cushioning and fast breakaway out of cushion. On hydraulic units, system includes floating metallic cushion bushing to assure fastest possible response and protection against damage from misalignment.

Start here.

And just keep on going...

with a McCord "plug-in" lubrication system.

You're on your way to no-shut-down operations!

Plug in a patented McCord divider valve, change flow proportions, or perform maintenance without disturbing lubrication lines. (Passageways, check valves, and ports are in the base block.) All you need is a hex wrench. No downtime.

Plug in just one McCord By-Pass block *now*. on valve block assembly, and you can provide for the addition of as many as 32 *new* lube points—anytime, without system redesign.

Other McCord components; reservoirs and pumps are also plug-in designed. So you *never* have to disconnect lines or tie up machinery for maintenance.

Take a whole system! Any lubrication system design for your application. McCord "plug-ins" give you faster installation, with greater economy on newer or existing equipment.

Only McCord can give you this kind of flexibility and reliability in a lubrication system. Because it all starts with the patented divider valve. And just keeps on going . . .

Write now for fact-filled brochure on the application of McCord Automatic Lubrication Systems.

When the job is a backbreaker, a tough, tiring, torturous grind, they always seem to pick a Parker coupling. This is that kind of a job. They knew it would take a Parker coupling to stand up. So here I am – in all kinds of weather, stepped on, frozen, covered with mud – but who's complaining. Not me. This is the kind of job Parker couplings were made for.

PARKER PH HANNIFIN
QUICK COUPLING DIVISION
8145 Lewis Road, Minneapolis, Minnesota 55427

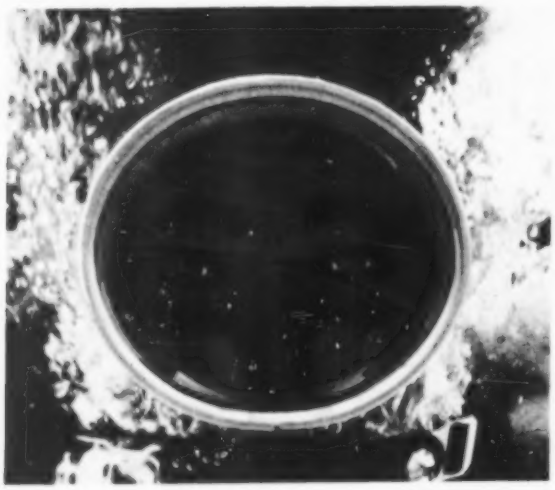
Bridgeport makes the valve you're looking for



We make valves for scuba gear, compressors, pumps, sirens, flotation collars, beer taps, missiles, toys and hundreds of other items.

Relief valves. Metering valves. Simple valves—and sophisticated. In miniature and standard sizes. You name it. We've got it. And we can save you money on it. Because it's already in production and can be built into your product right now! Tell us your problem. We'll show you the answer. Without obligation.

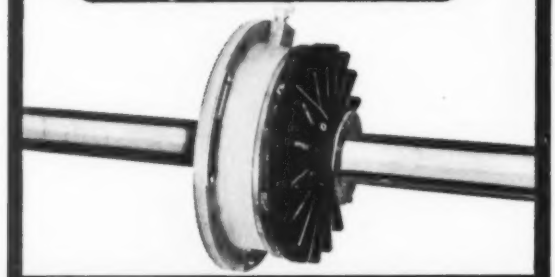
HORTON



SMOOTH STOPS!

"Air Champ" Brakes **guarantee** smooth, sure stops **without fading!** Ideal for stopping rotating parts, or with sheave adaptor, as a motor brake for single shaft motors to 25 h.p. Horton's exclusive design cools braking surface, eliminates heat build-up, prevents fading . . . assures smooth, positive stopping every time! Mounts anywhere. Four Models to 4300 inch lbs. torque. **Thousands of possible applications.** Write for free "Air Champ" catalog.

The
AIR-LINE LUBRICATOR
THAT WILL NOT CLOG!

Fill it with pipe scale, water, sludge, floor sweepings, junk of any kind you can imagine. As long as there's still some oil floating at the top of the bowl, it keeps on lubricating.

No other lubricator you can buy will keep working under those conditions!

Let us prove it. Have an M/P representative show you an air line lubricator you never have to clean, or we'll replace the working parts at no cost. Send for our free catalog to read while you're waiting for him.

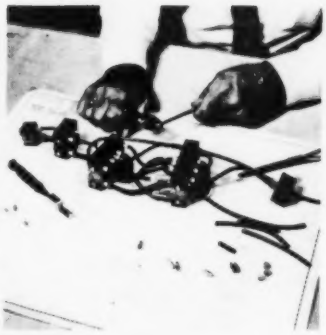
ASSEMBLE AND CHECK YOUR AIR CIRCUITS IN MINUTES WITH



PNEUCON SNAP-TOGETHER VALVES AND COMPONENTS

Whether you're designing a complex logic system for a textile mill, or a simple relay for a machine tool PNEUCON control valves and fittings will cut assembly and check-out time to a fraction of the time you're now spending with less flexible systems.

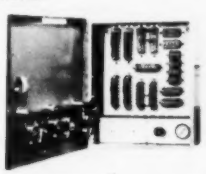
The photo shows how easy it is—part of a 22-valve system to control nine cylinder movements in a material handling application. Working from his diagram, the engineer was able to complete this circuit in only 45 minutes!

HERE'S HOW IT'S DONE

PNEUCON is a complete building block system of valves, spools, and accessories you can clip together or break apart with only a pen knife. Connections are made with a simple snap wrench. A working inventory would hardly fill your desk drawer (see photo). The system provides a multiple pilot capability (to perform such functions as "or" or "lock in") and a complete component selection including 2-, 3-, and 4-way valves with mechanical and pressure actuators. These can be purchased separately or as part of a PNEUCON packaged system. And PNEUCON is compatible with all electric, hydraulic, and pneumatic systems.

QUICK CHECK-OUT

When air is applied (40-60 psi), small "pressure on" and "pulse" indicators show system condition. Manual override of valves permits quick system check out; PNEUCON lets you SEE what you're creating, or modifying, instead of having to deal with abstract functions.



Here's the finished product—a 22-valve system paneled and enclosed in a box measuring only 12" x 14" x 6". PNEUCON can also be mounted "in line," manifolded, or base plated.

YOURS WITHOUT OBLIGATION

20-page booklet — how, when, why it pays to use PNEUCON snap-together valves and components. Write today!

Plan now to enter the 1970 FLUID POWER PRIZE PAPER CONTEST

The 1970 contest is now open to all readers of HYDRAULICS & PNEUMATICS magazine. If you have participated in a unique design or application of a hydraulic or pneumatic system or component and would like to tell the world about it, sharpen your pencil and dig in.

The top three papers will be published in the October issue of HYDRAULICS & PNEUMATICS magazine. All other award winning papers including honorable mentions will also be published and paid for at regular rates. Get your official contest rules by circling Reader Service Number 299.

FIRST PRIZE	$500
SECOND PRIZE	$300
THIRD PRIZE	$200
4th to 7th PRIZES, each	$100

Contest closes July 1, 1970
